

# YASSER JEROODI

Software Engineer | QA Engineer | Flutter & Cross-Platform Mobile Development

Damascus, Syria • [jerodi-yaser@hotmail.com](mailto:jerodi-yaser@hotmail.com) • +963 934 945 318 • [LinkedIn](#) • [Portfolio](#)

## PROFESSIONAL SUMMARY

Software Engineer with 4+ years of hands-on experience, and 1+ years of experience building, shipping, and supporting production Flutter applications across mobile, with hands-on quality assurance experience across functional, integration, regression, and release validation. Strong in Clean Architecture, performance and reliability engineering, real-time systems, offline-first design, testing, CI/CD, and end-to-end SDLC delivery.

## PROFESSIONAL EXPERIENCE

**Flutter Developer** | *Ministry of Emergency and Disaster Management* | August 2025 - September 2026

- Developed and supported production Flutter applications, including MEDVolunteer, contributing across requirements engineering, architecture, API integration, testing, NFR optimization, CI/CD, deployment, and operational support.

**QA Engineer** | *Ministry of Emergency and Disaster Management* | September 2026 - Present

## PROJECTS

**MEDVolunteer "إيد وحدة" - Volunteer & Emergency Response Platform** | *Production Mobile App - Deployed & In Active Use* | Flutter, Dart, Clean Architecture, Dio, Hive, GPS/Maps, Azure DevOps

- Engineered the Flutter mobile application for a volunteer management and emergency-response platform developed for the Ministry of Emergency and Disaster Management; the system is deployed and actively used in real operational workflows.
- Built a persistent Emergency Mode with response acceptance, live GPS tracking, maps/routes, recovery and reconnect behavior, and guarded navigation while an emergency response is active.
- Improved mobile NFRs with concurrent startup initialization (home screen in  $\leq 2s$ ), battery-aware GPS frequency, offline-aware networking, persistent local state, accessibility safeguards, and failure recovery.
- Contributed to release quality through automated CI gates, Android release builds, static analysis, secret gates, and integration/quality validation.

**Tello Printshop - Print Ordering & Workflow Platform** | *Production Mobile App - Deployed & In Active Use* | Flutter, BLoC, Clean Architecture, Dio, JWT, FCM/SSE, File Uploads

- Built and deployed a Flutter mobile application now in active production use, enabling authenticated customers to create and track print orders and graduation-project orders, upload files, review pricing/status, and manage account workflows.
- Structured the client with feature-based Clean Architecture and BLoC, dependency injection, secure JWT refresh-token rotation with queued request retry, and environment-based development/staging/production configuration.
- Implemented real-time order and notification updates with FCM and auto-reconnecting SSE, local file caching and upload validation, Arabic/English localization, and production API-key handling without hardcoded secrets.

## Additional Projects

**Al-Hadara Education Institute Management System** | *Lead Flutter Developer / Scrum Master* | Flutter, BLoC, Offline Sync, Biometrics

- Led Flutter delivery for a multi-app education platform; designed scalable modules for authentication, schedules, payments, notifications, and offline synchronization.
- Delivered biometric sign-in, real-time notifications, e-wallet payments, barcode scanning, and Agile/Jira sprint coordination.

**QuitMate - Privacy-First Wellness App** | *End-to-End Mobile Product* | Flutter, Riverpod, Clean Architecture, Isar

- Directed requirements, architecture, and implementation for an offline-only iOS/Android app with encrypted local data and zero outbound application data requests.
- Implemented behavioral scoring, achievements, streaks, animated craving tools, local notifications, and analytics in a modular architecture.

**Core Banking System - Secure Financial Platform** | Flutter, BLoC, SignalR, Firebase

- Architected a modular banking client using Clean Architecture and Facade, Observer, and Adapter patterns; integrated real-time financial streaming, notifications, and secure token storage.

**Mahroqat - gas-cylinder queue management app** using Riverpod, Clean Architecture, structured API integration, robust error handling, and persistent sessions.

**Gov-Citizen Complaint System - GPS-tagged complaint tracking** with OpenStreetMap, encrypted attachments, Firebase, SignalR/WebSockets, and unit tests.

**Drug Warehouse Management System** - Flutter mobile and web applications for inventory and logistics workflows.

## EDUCATION

**B.Sc. in Information Technology Engineering - Software Engineering** | **University of Damascus** | **August 2026**

**Mobile Application Development Using Flutter** | New Horizons | February 2022

## TECHNICAL SKILLS

**Mobile:** Flutter, Dart, cross-platform mobile/web, native integration, responsive/adaptive UI

**Architecture & State:** Clean Architecture, BLoC, Riverpod, MVVM, modularization, design patterns

**APIs & Real-Time:** REST APIs, Dio, Firebase/FCM, SSE, SignalR, WebSockets, Appwrite, third-party APIs

**Data, Offline & Device:** Hive, Isar DB, secure storage, offline synchronization, file caching/uploads, GPS/Geolocator, OpenStreetMap, biometrics, QR/barcode

**Testing & Delivery:** Unit, widget and integration testing, Azure DevOps CI/CD, Gitleaks, OSV Scanner, Git/GitHub

**Engineering:** Agile/Scrum, Jira, requirements engineering, system design, technical documentation, mentoring, Figma, spec-driven/agentic SDLC
