SUMMARY

Software engineer with 3 years of hands-on experience building scalable mobile applications with Flutter, BLoC, Riverpod, and Clean Architecture. Strong background in secure authentication, real-time features, offline-first persistence, testing, and Agile delivery. Focused on clean, maintainable code and reliable user experiences.

EXPERIENCE

Al-Hadara Education Institute Management System.

Lead Flutter developer for a multi-app education platform serving students, teachers, and administrators.

- Designed scalable BLoC layers for authentication, schedules, payments, notifications, and offline synchronization.
- Implemented feature-based modules to improve maintainability and simplify testing.
- Delivered secure authentication, biometric sign-in, real-time notifications, e-wallet payments, and barcode scanning.
- Led Jira sprints, Agile ceremonies, and stakeholder coordination as Team Lead and Scrum Master.

Mahroqat — Gas Cylinder Queue Management System

Developed a mobile application to organize and streamline gas cylinder distribution queues, improving accessibility and reducing wait times for citizens.

- Built using Clean Architecture with Riverpod for scalable and maintainable state management.
- Implemented secure authentication and token handling using Firebase and encrypted local storage.
- Designed a structured API integration layer with robust error handling and persistent user session management.

Core Banking System — Secure financial platform

Architected a secure, modular core banking platform with a focus on separation of concerns and testability.

- Applied Clean Architecture with BLoC to separate data, domain, and presentation layers.
- Used Facade, Observer, and Adapter patterns to simplify integrations and extension points.
- Implemented SignalR-based real-time financial streaming, secure token storage, and automated acceptance tests.

QuitMate — Privacy-first wellness app.

Built a privacy-first wellness app that helps users quit smoking and manage compulsive behaviors.

- Used Isar DB for offline-first persistence and Riverpod for reactive state management.
- Integrated Firebase analytics and push notifications to support engagement and insights.

Gov-Citizen Complaint System — Civic engagement & tracking

Developed a civic engagement app for submitting and tracking complaints with precise GPS tagging.

- Integrated OpenStreetMap, GPS handling, SignalR/WebSockets, and push notifications for real-time updates.
- Implemented encryption for sensitive attachments and unit tests for core components.

Drug Warehouse Management System

Built Flutter mobile and web applications for warehouse inventory and logistics management.

- Focused on modular architecture and testable code structure following Clean Architecture principles.

EDUCATION

Faculty of Information Technology Engineering - Software engineering
Damascus University. - Bachelor's degree

09/2021 - 09/2026

SKILLS

Flutter & BloC	Advanced	WebSocket & Real-time updates	Advanced
Architecture & Patterns	Advanced	Testing	Intermediate
Agile & Jira	Advanced	Figma	Intermediate
Git	Advanced	CI/CD	Basic
Push Notifications (Firebase)	Advanced
